

Are you the parent of a 12 to 17-year-old with moderate-to-severe plaque psoriasis?

Research study **IM011-126** Part A is evaluating the safety and tolerability of the study drug deucravacitinib in treating children with moderate-to-severe plaque psoriasis.

Your child may be eligible if he or she has moderate-to-severe plaque psoriasis and:

- Is 12 to 17 years of age
- Is able to swallow study medication
- Has been showing symptoms of plaque psoriasis for 6 months or more
- Has been diagnosed with moderate-to-severe plaque psoriasis*

The study doctor will also check other requirements to decide if your patient is eligible to take part in this study.

If eligible, your child may receive[†]:

- Study-related medical care
- Study-related lab work and procedures

For more information about the IM011-126 research study, ask your doctor or contact the research team below:
